EDUCATION

Masters in Computer Science Software Engineering

Arizona State University, USA

May 2025

GPA: 3.7/4.00

Bachelors in Computer Science and Engineering

Savitribai Phule Pune University, India

June 2023

GPA: 3.8/4.00

EXPERIENCE

Microsoft, Redmond, USA

Oct 2025 to Present

Software Engineer

- Working as part of Azure Resource Notifications (ARN) team in Azure Platform and Management Services, building a **pub-sub service** handling 100B+ notifications/day on publisher end and 500B+ on subscriber end.
- Led **CapacityFlow**, a fault-tolerant Durable Task Framework based orchestration service that automated capacity reviews workflows, authored TSGs, increasing review frequency by 7x and enabling proactive capacity planning.
- Developed **StateGuard**, a C#/.NET validation service that automatically detected configuration drift across Azure messaging infrastructure, preventing recurring operational issues and reducing 4+ hours of weekly on-call effort.

Dawgzonline, Mumbai, India

Jan 2022 to Feb 2023

Software Development Engineer

- Spearheaded a self-serve onboarding service** to provision vendor-specific Lambda APIs, DynamoDB tables and CloudWatch alarms using declarative CDK. Reduced partner integration time from ~3 days to under 1 hour.
- Implemented **NotifyNow**, a **restock alert system using SNS + SQS** to message users when high-demand SKUs were replenished. Reclaimed \$18K+/month in previously lost orders and increased returning user engagement.
- Engineered **SwiftStock**, a real-time inventory tracking microservice using DynamoDB Streams and Lambda across 3 warehouses and 10K+ SKUs, reducing delayed shipments by 20% and improving fulfillment accuracy.

SKILLS

Languages / API's: Java, Python, JavaScript, TypeScript, C++, SQL, KQL, C#

Backend: Spring Boot, .NET, React, Node.js, Next.js, Express.js, REST APIs, Microservices, Distributed Systems, Event-Driven Architecture, Kafka, WebSockets. Data Structures, Algorithms, Object-Oriented Design (OOD & OOP), Design Patterns, System Design, Multithreading, Concurrency.

Cloud: AWS CDK, Azure SDK, Lambda, ECS, S3, DynamoDB, API Gateway, Event Hub, Event Grid, Cosmos DB, Kubernetes, Docker, Service Fabric, cloud-native architecture.

Databases: PostgreSQL, MySQL, MongoDB, CosmosDB, Redis, NoSQL

Frameworks / Tools / Practices: Git, GitHub Actions, Agile, CI/CD, Geneva, Monitoring, Observability, SDLC.

PROJECTS - <https://github.com/IMSUMEET>

VeloCity (Delivery Optimization Platform) github.com/IMSUMEET/velocity

March 2026 to May 2026

- Designed a full-stack **delivery marketplace control plane** using Spring Boot, React/TypeScript, Kafka, Redis, PostgreSQL, and STOMP WebSockets to model real-time dispatch, fleet, queue, incident, and trace workflows.
- Implemented **Dijkstra-based routing** and weighted driver matching across Balanced, Fastest ETA, and Lowest Cost strategies with REST controls for reassignment, priority updates, mitigation, and route recalculation.

LeetDesign (System Design Reimagined) github.com/Oblivion-Labs-Dev/Leetdesign

Nov 2025 to April 2026

- Launched an interactive system design platform enabling users to visually design scalable architectures using microservices, load balancers, databases, caches, queues, and event-driven components.
- Integrated a real-time architecture analysis engine using Kafka, Neo4j, Redis Pub/Sub, and WebSockets to simulate production workloads, detect service bottlenecks, visualize failures, and evaluate scalability trade-offs.

Optica (Interactive Algorithm Visualizer) <https://imsumeet.github.io/optika>

Feb 2026 to April 2026

- Built a reusable algorithm simulation framework across sorting, pathfinding, trees, and graphs, enabling users to build scenarios, compare algorithms, and inspect step-level decision states through animated visuals.

Framewise (Serverless Video Analytics) github.com/IMSUMEET/face-recognition-aws

Feb 2026 to April 2026

- Coded a serverless video-recognition pipeline using S3 triggered AWS lambda, ffmpeg/OpenCV, and dockerized ResNet-34 inference from ECR hosted containers, reducing latency less than 2 sec across 100+ videos.
